OUR NEWSLETTER FOR GROWING BUSINESSES

With exporting, the stakes are high, so it's vital to do your homework before taking the plunge. We explore the research you need to do and talk to a fashion duo who've cracked the overseas market.

You'll also discover if you're eligible for an R&D tax credit, why you'll love an NZBN and the good news on plastic pollution.

Keen to export: know where to start?

Here's what you need to think about before hitting the (overseas) ground running.

- What's your value proposition?** Having a short statement outlining what is unique about your product is not only a powerful selling tool, it helps you work out whether there's even an offshore market for it.
- Which markets will return the most profit?** Unsure where to export? Ask yourself these questions: Can you enter the market? Is it a good place to do business? Is there a real opportunity for what you offer? Can you reach your customers easily?
- Know your market:** Get on a plane, visit trade shows, expos and do some digging on your competitors, their pricing and distribution channels.
- Who will you partner with?** Agents and distributors are the most common channel choice for Kiwi exporters but consider an overseas office, selling directly to customers online, licensing or franchising too.
- Can you handle global growth?** Don't commit to exporting until you're armed with adequate financial resources, a committed management team and proof your product does well in New Zealand.
- Do a compliance checklist:** Failing to comply with international requirements is risky. Look into product liability insurance, product safety and standards, packaging and labelling, barcodes and tracking, transport, and online compliance. Set aside a budget for these changes to avoid nasty surprises.
- Will you make a profit?** The cost of exporting is different for every business. You'll need to complete a cash flow forecast and work out your break-even point to see if it's even viable.
- What's your pricing strategy?** Work out your costs, ensuring a healthy profit in your final prices, then talk to the experts about which pricing strategy is on point for your business and market.
- How will you get your product overseas?** Think hard about your product, its customer, and where your goods need to go. Then get advice from a professional freight company or customs broker.
- Can you afford to export?** Even established businesses feel the financial strain of exporting. Seek good financial planning advice early on and consider debt funding (loans, leases, overdrafts, terms of trade) or equity funding to finance your offshore activity. Whichever way you go, put some fat in your budget to cover unexpected costs!

To explore the above in more detail, Google: NZTE's Export Essentials Guide.

Hotmilk a hit on the global stage

When long-time friends Lisa Ebbing and Ange Sloan teamed up to launch fashion-forward maternity lingerie, they had a global brand in mind. Now, just 7% of their business is local with international sales streaming in via their thriving website and the 300 stores across the globe selling their provocative but practical products.

Here's what Lisa and Ange have to say about their exporting journey, plus a few gold nuggets of advice for businesses looking at expanding offshore.

At what point did you think Hotmilk could fly internationally? Immediately! We knew straight away that to get the volume we needed, we'd have to go overseas. The immediate reaction we had to our product from retailers in New Zealand alone encouraged us to move very swiftly into other markets.

What was your first exporting step? We started in Australia and went door-to-door visiting stores to showcase the product and we exhibited at trade fairs. Within three years we had cemented the brand in New Zealand, Australia and the UK. Our early stage website enabled anyone searching "nursing bra" to find us and our stockists.

How did you do your international market research? Trade fairs and expos are a great way to understand the market. Watching what other people in the industry are doing helps too.

Who did you go to for export advice? We went through New Zealand Trade and Enterprise (NZTE) and had a number of mentors over the years. We definitely waited too long to get expert advice, so I always tell people to do it first!

Export NZ advises: Don't assume that what sells here, will sell there. Do you agree? Definitely. We've learnt not to take it for granted that what works in one country will work in another. There's a massive difference between all the countries we do business with. For instance, the UK loves black underwear, the US loves nude. We have to have different margin expectations between countries too.

What costs are involved with exporting? The duty, taxes, freight and logistics of 3PL warehousing and the travel involved are definitely expensive. Make sure you do your homework first to avoid surprises.

How did you cope with the increasing sales? We've always had an amazing team in place at head office, and 3PL (third-party logistics) warehouses and our factory relationships have been critical.

What logistics did you have to consider before exporting? Where to service each market from, for example: EU from the UK, Canada from the US, Australia from New Zealand. We are looking at a centralised warehouse, perhaps in Hong Kong. Registering for tax and duties is another thing to consider, and pricing, as it does vary considerably between markets.

What's your advice for businesses looking at exporting? Get advice, advice, advice! Before you think you need it, put your hand up and ask for help. It's not easy being global, it means you have a lot of balls up in the air at any one time, but it's definitely rewarding and exciting!

HOTMILK'S TOP EXPORTING TIPS

- ✓ Get expert advice before you take a single exporting step.
- ✓ Make a list of key trade shows, exhibitions and conferences - and go!
- ✓ Put your dream team in place to handle global sales to avoid scrambling and stress.
- ✓ Know that it won't happen overnight, do your research and believe in yourself!

NZ says goodbye to millions of single-use plastic bags

It's taken 17 years to follow in the footsteps of Bangladesh, the first country to ban single-use plastic bags, but we're finally there! From 1 July, single-use plastic bags can't be sold or given away in New Zealand. It's all part of the Government's programme to reduce waste and build the foundations for our transition to a 'circular economy' where eventually waste will be designed out of the system.

So, what IS a single-use plastic shopping bag? They're the plastic bags with handles (made of plastic up to 70 microns in thickness) found at supermarkets, takeaways, and other retailers.

The phase out also applies to heavier boutique-style shopping bags and the 'emergency' bags currently offered by some supermarkets as an alternative to a free single-use bag. It includes bags made of degradable plastic (ie, biodegradable, compostable and oxy-degradable) regardless of whether the plastic material is sourced from fossil-fuel, synthetic compounds or from biological sources such as plants.

Which plastic bags are still allowed? Bin liners, bags for collecting pet waste and barrier bags used when buying meat, fruit and vegetables (unless they have handles).

What can we expect at the checkout? Manufacturers and retailers have until 1 July to phase out single-use plastic bags completely, or face six-figure fines. Retailers are offering reusable bags, paper shopping bags or even cardboard boxes to help customers adjust. The Government is encouraging shops to move away from any single-use option, including paper.

What can people use instead? There are loads of different reusable bags on the market, including bags made from heavier-duty plastic, hessian, lightweight nylon, cotton, recycled fabric or jute. Shoppers can also use wheeled trolley bags, backpacks and home-made bags. The trick is remembering them!

A message from Marie-Claire Andrews who is the Programme Manager for the Wairarapa Economic Development Strategy and was involved in the establishment of AngelHQ, Wellington city's angel investment club .

Movers and shakers of the Wairarapa - we need YOU!

We're hoping to launch an angel investment club later this year, and need to find our smart, connected people who might like to add another asset class to their investment portfolio.

Generating returns from inspirational high-growth, startup companies is critical for New Zealand - and for the Wairarapa. These companies are our future economic powerhouses. Investing in these companies is not for the faint-hearted but it is enjoyable and a rewarding use of time and capital.

This event will feature presentations from angel investors, angel backed companies and an overview of the proposed Wairarapa Angel Network.

Coming along doesn't commit you to investing! We just want to spark conversations - but feel free to forward this to friends, family and connections that might be persuaded to participate in boosting our region's innovations.

Come and find out more and see if there's an angel inside you trying to get out!

Drinks and canapes will be served. <https://www.eventbrite.com/e/are-you-an-angel-investor-tickets-62098253548>

Conducting R&D? Cash in!

Are you conducting research and development on home turf? You could be eligible for a tax credit of 15% on eligible R&D expenditure. The Government have introduced legislation bringing in a new R&D tax credit effective from the 2019/20 income tax year (1 April 2019 for most taxpayers) to encourage more Kiwi businesses to invest in new or improved processes, services or goods. It means innovative companies can receive a tax credit and maybe then have a bit of extra cash to help grow their business when they need it most.

So, who can get the tax credit, and who can't?

YOU MAY BE ELIGIBLE IF YOUR R&D ACTIVITY:

- Has a goal to create new knowledge, or new or improved processes, services or goods; and
- Uses a systematic approach to resolve scientific or technological uncertainty, and
- Is new on a worldwide basis, not just new to your business or New Zealand, and
- You spend more than \$50,000 on R&D

YOU'RE NOT ELIGIBLE IF:

- The knowledge required to resolve the scientific or technological uncertainty is not publicly available and cannot be worked out by a competent professional in that field with a systematic process
- You performed the R&D on contract for other parties, received a Callaghan Growth Grant in the same tax year, are associated with/controlled by a Crown Research Institute, DHB, or tertiary education organisation.
- Your research was conducted in the social sciences, humanities, arts or investigating the market for your product or service
- Someone has already successfully done what you are trying to do. You must be able to show that you searched for an existing solution before you started your R&D.

Could this apply to you? Make sure you have clear, accurate information about the project's content, scope and costs involved (including appropriate apportionment of overheads). You can't create the documentation at the end of tax year. It needs to be done as the R&D is progressed. Clearly record your R&D expenditure as it is incurred so it's easily identifiable. The documentation requirements are detailed so it is important to do this correctly. Unsure if you're eligible? Call us to talk about your R&D project.

Business Health Check

- Looking to export? Get insights and tips at an NZTE workshop near you or book a meeting for expert advice.
- Running an R&D project? Get your paperwork sorted for your tax credit application.
- Consider gifting staff or customers a good quality reusable bag to support the single-use plastic ban.

KEY TAX DATES - JUNE 2019
